Executive Overview

AI-Powered Recruitment System (AIRCMS)

AI-driven platform integrating Salesforce to streamline end-to-end candidate lifecycle management, designed as a college major project within the Department of Computer Science and Engineering.

Visual Theme & Design Guidelines

Corporate-style hero layout with AI and Salesforce-inspired background, emerald and slate color palette, soft gray surfaces, rounded cards, subtle shadows, and bold Poppins/Segoe UI typography for key headings.

Team Members & Roles

Rohith Sai Anjan Gavara – Salesforce

Amrutha Satya Preethi Tanala

Phase 1 – Requirement Analysis & Planning

Objectives & Requirements Overview

Define AI-enabled Salesforce recruitment platform solving fragmented workflows; capture business needs like faster hiring, tracking, productivity, analytics, plus system needs covering data model, AI, integration, security.

Workflow Analysis & Phase Planning

Map recruitment stages from posting to offer; translate stakeholder needs into requirements, scope, and phased plan using milestones, sprints, and prioritized core modules versus future enhancements.

Phase 2 – Salesforce Backend Architecture

Phase 3 – UI/UX Development & Customization

Lightning Experience & Core Screens

Dedicated AIRCMS Lightning app with custom navigation, tailored record pages for jobs, candidates and applications, plus recruiter dashboards showing KPIs, pipelines and AI-suggested candidates.

Responsive Layout & AI Enhancements

Responsive, card-based UI optimized for desktop and tablet, 360° candidate records, embedded AI recommendation panel, and annotated Salesforce mockups illustrating key pages and dashboard widgets.

Phase 4 – Data Migration, Testing & Security

Data Migration & Functional

Validation

Identify data sources, map records to Salesforce objects, cleanse inconsistencies, then validate CRUD operations, workflows, approvals, and AI recommendations align with recruitment and candidate management requirements.

Testing, Security & Compliance Cycle

Conduct integration testing with email or HR systems, run recruiter-focused UAT, design profiles, roles, sharing rules, apply validation, audit fields, ensure compliance, and enforce permissions with continuous monitoring.

Phase 5 – Deployment & Maintenance

Deployment & Documentation

Deploy metadata via change sets or DevOps pipelines to higher orgs; maintain technical design docs, data model diagrams, and configuration catalogs ensuring consistent, auditable system evolution.

User Support, Maintenance & Roadmap

Provide recruiter/admin guides, step-by-step flows and FAQs; implement bug fixes, enhancements, AI performance monitoring, and roadmap features like resume parsing, ranking, predictive analytics, email automation, GitHub access.
